# A Profile of U.S. Multinational Companies in 1977

 ${
m T_{HIS}}$  article presents a profile of U.S. multinational companies (MNC's), based on data from BEA's 1977 benchmark survey of U.S. direct investment abroad.1 It discusses industry characteristics of the MNC's, their size, the location of their operations, the U.S. parents' percentage ownership in their foreign affiliates, and the form of organization of parents and affiliates. Forthcoming studies will discuss, in greater depth, specific aspects of the MNC's, such as their growth since the last benchmark survey of 1966, sales, gross employment, product. technology, sources and uses of funds, and U.S. merchandise trade.

U.S. direct investment abroad exists when one U.S. person (U.S. parent) has a direct or indirect ownership interest of 10 percent or more in a foreign business enterprise (foreign affiliate). U.S. MNC's are U.S. companies that have direct investment abroad. An MNC consists of the U.S. parent and all of its foreign affiliates.

The 1977 benchmark survey was a census, i.e., it was intended to cover the universe of U.S. MNC's. Reports were received for 3,540 U.S. parents and their 24,666 foreign affiliates. Although a large number of very small affiliates were exempted from the survey in order to ease the reporting burden, coverage

Nore.—Arnold Gilbert programmed the tables, with assistance from Richard Mayery.

of the universe in terms of values was virtually complete.

The benchmark survey covered parents and affiliates in all industries. However, this article will cover only nonbank MNC's. A nonbank MNC consists of a nonbank U.S. parent that has at least one nonbank foreign affiliate, and its nonbank affiliate(s). In the 1977 benchmark survey, much more data were collected for nonbank parents and affiliates, because the latter already were required to report most of the information needed for policy purposes to other U.S. Government agencies.

The 3,425 nonbank parents of nonbank affiliates accounted for 97 percent of both the number and employment, but only 73 percent of the total assets, of all U.S. parents; similarly, the 23.-641 nonbank affiliates of nonbank parents accounted for 96 percent of the number and 98 percent of the employment, but only 59 percent of the total assets, of all affiliates. Assets of nonbank parents and affiliates tended to be lower, on average, than those of bank parents and affiliates, because the assets of the latter included substantial financial claims arising from their lending activities. (Their liabilities tended to be high also, because of their sizable borrowing activities and customers' deposits.) In the remainder of this article and in all accompanying tables, the term "U.S. MNC's" refers only to nonbank MNC's, as defined above. "U.S. parents" refers only to nonbank parents of nonbank affiliates, and "foreign affiliates" refers only to nonbank affiliates of nonbank parents.

The characteristics of U.S. MNC's could be described using a number of different items, such as total assets,

sales, or employment. For simplicity, most of the discussion here is in terms of a single item—total assets. (One exception is in the discussion of industrial diversity, where some of the necessary data are available only for sales.) However, the number, sales, and employment, as well as the total assets, of MNC's are presented in most of the tables and are mentioned in the text, to the extent that they add to the discussion of a given characteristic.

Highlights of this article are:

- U.S. MNC's had worldwide consolidated assets of \$1,818.2 billion in 1977; 42 percent were in manufacturing, 23 percent in finance (except banking), insurance, and real estate, 16 percent in petroleum, and 13 percent in "other industries" (mainly transportation, communication, and public utilities). The remaining 6 percent were in trade and mining.
- A majority of affiliates were classified in the same industries as their U.S. parents, or in industries that complemented or were closely related to those of their parents.
- Industry specialization ratios—the percentage of an MNC's total sales that were in the MNC's own industry of classification—ranged from 72 percent in mining to almost 90 percent in petroleum and trade.
- The distribution of sales by MNC industry of classification did not differ significantly from that by industry of the sales themselves.
- The distribution of worldwide consolidated assets of U.S. MNC's was highly skewed toward the large MNC's. The 62 largest—those with assets of at least \$5 billion each—accounted for less at than 2 percent of the number, but for 50 percent of the assets, of all MNC's.

<sup>1.</sup> The April 1981 SURVEY OF CURRENT BUSINESS gave a brief description of the benchmark survey and highlights of the data. See International Investment Division, "1977 Benchmark Survey of U.S. Direct Investment Abroad," SURVEY 61 (April 1981): 29-37. Detailed data and a more complete methodology of the survey were published in U.S. Direct Investment Abroad, 1977; cooler may be obtained from the Superintendent of Documents, U.S. GPO, Washington, D.C. 20202, price \$10.00, stock number 002-010-00079-1.

- Affiliates accounted for 24 percent of the aggregated assets of U.S. parents and affiliates. By industry of MNC, affiliates' shares of aggregated assets ranged from 28 percent in petroleum to 10 percent in finance (except banking), insurance, and real estate.
- ◆ Almost three-fourths of affiliates' assets—\$359.6 billion out of \$490.2 billion—were in developed countries. Assets of affiliates in Canada, at \$86.2 billion, were the largest for any single country. Assets of European affiliates were \$206.6 billion and were mainly in the European Communities (9). Almost two-thirds of the assets of affiliates in developing countries were in Lutin America.
- Nearly one-half of U.S. MNC's had affiliates in only 1 country. Only 4 percent had affiliates in more than 20 countries.
- Eighty-three percent of affiliates were majority-owned (i.e., owned more than 50 percent) by their U.S. parents; of these, 86 percent were wholly owned.
- Globally, majority-owned affiliates accounted for nearly three-fourths of total affiliate assets. Their shares of assets were significantly less in countries—such as South Korea, Japan, India, Spain, and Mexico—that maintained restrictions on majority ownership by foreign investors.
- Most U.S. parents and foreign affiliates were incorporated. Incorporated parents accounted for 99 percent of the assets of all parents, and incorporated affiliates accounted for 87 percent of the assets of all affiliates.
- Sixty-one percent of affiliates were single-establishment enterprises. Only 6 percent had II or more establishments.

## Industry Characteristics of MNC's

## Distribution of MNC assets by industry

In the 1977 benchmark survey, data were collected for, and an industry code assigned to, the U.S. parent and each of its foreign affiliates separately; the codes were based on the industry in which the individual parent's or affilinte's sales were largest. Because an MNC-wide industry code (i.e., a code based on the worldwide consolidated activities of the MNC as a whole) was not available from the survey, in what fol-Iows, each MNC is classified by industry of U.S. parent. In a majority of cases, however, the U.S. parent's industry was probably also the MNC-wide industry, because, as will be discussed later, U.S. parents normally accounted for a much larger share of total MNC operations than did their foreign affiliates, and a majority of affiliates were classified in the same industries as their parents.

Table 1 presents selected data for U.S. MNC's by industry of U.S. parent. For MNC's worldwide, total assets are shown two ways-aggregated and consolidated. Aggregated assets are the sum of the assets of U.S. parents and of their foreign affiliates, which were reported separately in the 1977 benchmark survey. This sum contains duplication because of intercompany positions between a parent and an affiliate or between two affiliates of the same parent; these positions give rise to assets on the books of both the parent and the affiliate, or of the two affiliates, involved. Consolidated assets are assets after elimination of the duplication of intercompany positions. Worldwide consolidated assets of MNC's were not reported in the 1977 benchmark survey, but the data needed to remove most of the duplication were reported. (For derivation and further explanation, see the technical note.) In 1977, consolidated assets of the MNC's were roughly approximated to be \$1,818.2 billion, compared with aggregated assets of \$2,033.4 billion. Thus, a little over 10 percent of aggregated assets were eliminated by consolidation.

By industry of U.S. parent, manufacturing accounted for 42 percent, finance (except banking), insurance, and real estate for 23 percent, petroleum for 18 percent, and "other industries" (mainly transportation, communication, and public utilities) for 13 percent, of MNC worldwide consolidated assets. The share of trade was 5 percent and that of mining less than 1 percent.

Of the manufacturing total, 21 percent was in transportation equipment, 15 percent in chemicals, 14 percent in metals, and 18 percent in nonelectrical machinery. In finance (except banking), insurance, and real estate, MNC's in insurance had the largest share of assets.

The distribution of MNC aggregated assets by industry of U.S. parent was virtually the same as that of MNC consolidated assets. However, the distributions of MNC sales and employment by industry each differed significantly from that of either asset measure.

U.S. MNC's had worldwide (aggregated) sales of \$2,060.3 billion and worldwide employment of 26,081,000 in 1977.2 MNC's in manufacturing and trade accounted for larger shares, and MNC's in finance (except banking), insurance, and real estate for smaller shares, of both sales and employment than they did of assets (chart 11). In the latter industry, ratios of sales to assets, and of employment to assets, are usually significantly lower than those in other industries; assets of enterprises in this industry often include very sizable investment portfolios, which, on average, generate lower "sales" (in this case, mainly dividend and interest receipts) and support fewer employees than other types of assets.

Petroleum MNC's accounted for a larger share of sales, but a much smaller share of employment, than of assets. Their larger share of sales probably reflected the substantial duplication in their sales data because of intercompany transactions. Before being sold to final customers, petroleum is typically resold several times within the MNC-for example, by extractive affiliates to refining affiliates, and then by refining affiliates to marketing or distribution affiliates. The smaller share of employment accounted for by petroleum MNC's mainly reflected the relatively high capital (and low labor) intensity of the petroleum industry.

Only aggregated, not consolidated, worldwide MNC takes are shown in the tables and discussed in this acticle. A fortbeaming study will estimate consolidated worldwide MNC sales.

MNC = multinational occupany:

D Suppressed to avoid disclosure of data of individual companies.

D. Befined as worldwide MNC assets after consolidation to eliminate the duplication of assets that reflect intercompany positions between a parent and its affiliate or between 2 affiliates of the same parent. See text for further discussion.

2. Equals some of total essets of U.S. parents (column 5) and of their foreign affiliates (column 6), which were reported assets affiliates to the 1877 benchmark survey. This sum contains duplication of assets that reflect intercompany positions between a parent and its affiliates of the same parent. See fext for further discussion.

3. Equals sum of aslets of U.S. parents (column 8) and of their foreign affiliates (column 0), which were reported separately in the 1977 benchmark survey. This sum contains duplication because of intercompany sales.

<sup>4.</sup> Because intercompany positions between parents and affiliates give rise to assets on both the U.S. perents' and factiga affiliates' books, the decision to remove such assets from one set of books of the other in order to eliminate the duplication would be essentially arbitrary. Thus, in calculating U.S. parents' and affiliates' respective shores of worldwide MNC assets, agreened, rather then consolidated, worldwide sessis are used as the denominator.

5. Consists of U.S. perents that are individuals, astates, and trusts. Data for such U.S. parents appear as zeros because these parents were not required to report financial and operating data in the 1077 benchmark survey. Foreign affiliates were not classified in this category, however, when data for affiliates are classified by industry of U.S. parent, the data for the inflicted to such parents are shown against this entegory.

NOTE.—In this table, dots for U.S. MNC's are only for nonbank MNC's; data for U.S. parents are only for nonbank parents of nonbank affiliates are only for nonbank affiliates of nonbank affiliates of nonbank affiliates of nonbank affiliates.

## Comparison of affiliate and parent industries

A majority of foreign affiliates were classified in the same industries as their U.S. parents, or in industries that complemented or were closely related to those of their U.S. parents. This suggests that the classification of a U.S. MNC by industry of U.S. parent, in most cases, provided an adequate description of the major industrial activity of the MNC as a whole.

Table 2 shows total assets of foreign affiliates disaggregated by industry of U.S. parent, cross-classified by industry of the affiliate itself. Affiliates classified in the same industries as their U.S. parents accounted for more than one-half of the assets of all affiliates of U.S. parents in each of the six major industries shown in table 2. Their shares of assets ranged from 84 percent in mining to 52 percent in "other industries."

Affiliates classified in manufacturing accounted for 66 percent of the assets of all affiliates of manufacturing parents. Most of the remaining assets were accounted for by affiliates in trade and in finance (except banking), insurance, and real estate (which includes holding companies); in general, these affiliates' activities complemented the MNC's manufacturing operations—by selling the goods produced, or by obtaining financing for, or holding equity interests in, the manufacturing operations.

Affiliates in petroleum accounted for 79 percent of the assets of all affiliates of petroleum parents. As in manufacturing, most of the remaining assets were accounted for by affiliates in complementary or related industries; affiliates in finance (except banking), insurance, and real estate—mainly finance and holding companies—accounted for 9 percent, and affiliates in chemical manufacturing—particularly in petrochemicals—for 4 percent.

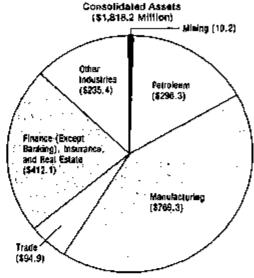

Within manufacturing, the shares of total affiliate assets accounted for by affiliates classified in the same industries as their parents ranged from 69 percent in foods to 34 percent in electrical machinery. In each industry except metals, the remaining assets were largely accounted for by affiliates in

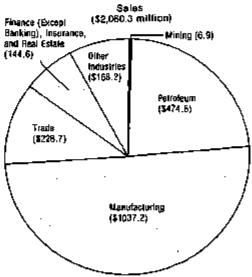

trade and in finance (except banking), insurance, and real estate; in metals, they were largely accounted for by mining affiliates. The share of remaining assets accounted for by finance affiliates was particularly large in transportation equipment, where most MNC's have established separate affiliates to handle the financing of their sales, both to final customers and to dealers. Sales financing is needed in this industry more than in most others, because of the sizeable per-unit expenditure involved in purchases of transportation equipment. In addition, a large portion of final sales are to individuals, who, compared with businesses, tend to rely more heavily on financing provided by sellers. The share of remaining assets accounted for by trade affiliates was particularly large in electrical and nonelectrical machinery.\*

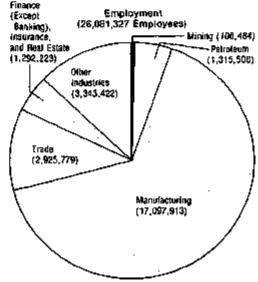

In most industries, affiliates classified in the same industries as their parents accounted for higher percentages of both the sales and employment, than they did of the assets, of all affiliates. The major exception was in finance (except banking), insurance, and real estate, where affiliates in the same industries as their parents accounted for 40 percent of sales and 17 percent of employment, compared to 67 percent of assets. In all other major industries, affiliates in the same industries as their parents accounted for at least 68 percent of the sales and 75 percent of the employment of all affiliates.

Although, in value terms, a majority of affiliates were classified in the same industries as their parents, many affiliates were not. As a result, the distribution of affiliate assets by industry of U.S. parent (first column of table 2) differed significantly from the distribution of those same assets by industry of the affiliates themselves (first row of table 2). When disaggregated by indus-

## Worldwide Consolidated Assets, Sales, and Employment of U.S. MNC's, by Industry

U.S. Department of Commerce, Sureau of Economic Analysis

<sup>3.</sup> In electrical machinery, the relatively small share of total affiliate assets accounted for by affiliate in electrical machinery, and the relatively large share of remaining assets accounted for by affiliates to trade, may have been partly due to classification problems involving a large, highly diversified, minority-owned affiliate. When this affiliate's report was filed, information from its U.S. parent indicated that it was a trade affiliate; information obtained after publication of the 1977 benchmark survey results indicated that the affiliate probably should have been classified in electrical machinery manufacturing.

try of U.S. parent, affiliate assets were more concentrated in manufacturing and, to some extent, petroleum, and less concentrated in mining, trade, and finance (except banking), insurance, and real estate, than they were when disaggregated by industry of affiliate.

## Industrial diverstiy of MNC's

In the 1977 benchmark survey, each U.S. parent and foreign affiliate was required to disaggregate its sales by the industry of the sales themselves. As noted earlier, a parent or affiliate was classified in the one industry in which its sales were largest, even though it may have had significant sales outside that industry.

Table 3 shows, for MNC's, and for parents and affiliates separately, sales that were in their own industries of classification and sales that were in other industries. It also gives industry specialization ratios—defined as the ratio, in percentage terms, of sales in an MNC's, parent's, or affiliate's industry of classification to total sales by the MNC, parent, or affiliate. The higher the ratio, the more specialized are the enterprises classified in the industry.

For MNC's as a whole, specialization ratios in the six major industries shown in table 3 ranged from 72 percent in mining to almost 90 percent in petroleum and trade. In manufacturing, the ratio was 83 percent; however, the ratio was well below this in each manufacturing subindustry. Industry specialization ratios depend, at least in part, on the level of industry aggregation used for data presentation—the ratio will tend to be higher the more aggregated the industry structure used (and hence the larger the number of subindustries included in a subtotal). Accordingly, care should be taken in comparing the ratios, as shown in table 3, for industries that are at different levels of aggregation.

Foreign affiliates had higher specialization ratios than their U.S. parents in nearly every industry shown in table 3. For the six major industries, parent ratios ranged from 67 percent in mining to 91 percent in trade, whereas all affiliate ratios exceeded 92 percent.

MNC = multinational company.

• Less than \$300,000.

• Suppressed to avoid disclosure of data of individual companies.

• Less than \$300,000.

• Suppressed to avoid disclosure of data of individual companies.

• When a subtotal of substitute of the subtotal of the subtotal allows sales by the MNC's worldwide, the U.S. portries, or the affiliates, respectively, in all ambinduatries included in the subtotal, not just in the angle subtodation which the MNC, parent, or affiliate is absoluted. Thus, sales in a subtotal may be larger than the mm of cales in the subtodatal sales in the subtodatal.

• For each U.S. parent and becign affiliate, bettribution of sales by 8-digit BEA industry was recalled in the 1977 benchmark curvey. However, only the 8 largest industry categories for U.S. perants, and the 5 largest for affiliates, bed to be specified. If a given parent for affiliates had to be specified. If a given parent for affiliates had to be specified industries of tales would have covered less than 100 percent of its total tales. Sales in unspecified industries are shown

in columns 4, 9, and 14. In a subtotal in column 2, 7, or 12 of this table, cales in unspecified industries are excluded.

3. In this article, the industry of classification of an MNC as a whole in the industry of the U.S. perent.

4. Column 1, which is equal to the sum of U.A. perent data and lorder affiliate data. both by industry of U.S. perent, is not equal to the sum of columns 6 and 11, because the foreign affiliate data in column 11 are by industry of affiliate. Similarly, columns 2, 3, and 4 do not equal the sums of columns 7 and 12, 8 and 13, and 9 and 14, respectively.

5. See feetenes 5, table 1.

Norte,—In this table, data for U.S. MNC's are only for nonbank MNC's; data for U.S. parents are only for nonbank parents of nonbank additates; and data for additates are only for nonbank parents.

Table 4.—Sales by U.S. MNC's Worldwide, and by U.S. Parents and Foreign Affiliates, 1977, by Industry of Classification and by Industry of Sales

sales for which no industry was specified were ellocated among industries in the same proper tion as the shares of these industries in sales for which an industry was specified. The unspecified sales were thus given the same distribution as the specified sales.

3. See fortnote 5, table 1.

Norz.—In this table, date for U.S. MNC's are only for nonbank MNC's; date for U.S. perents are only for nonbank parents of nonbank affiliates; and data for affiliates are only for nonbank affiliates of nonbank parents.

MNC = multinational company.

D Suppressed to avoid disclosure of data of individual companies.

I. For an MNC as a whole, the industry of classification in this article is the industry of the U.S. parent.

2. For each U.S. perent and foreign affiliate, a distribution of sales by 3-digit BEA industry was required in the 1977 benchmark survey. However, only the 6 largest industry categories for U.S. parents, and the 5 largest for loreign affiliates, had to be specified. If a given parent for affiliate) had sales in more than the 8 [or 5] 3-digit categories apeclified. If a given parent for affiliate) had sales in more than the 8 [or 5] 3-digit categories apeclified. If a given parent for affiliate, and sales would have covered less than 100 parent of its total sales. In columns 3, 4, and 6.

Within manufacturing, most parent ratios ranged from 50 to 80 percent, whereas nearly all affiliate ratios exceeded 80 percent. The higher affiliate ratios partly reflected the fact that, as discussed in the next section, affiliates tended to be much smaller than their U.S. parents. Smaller companies are generally less diversified than larger ones, because, in most cases, only the larger ones can simultaneously produce a number of different products on an economically efficient scale. In addition, the types of capital, labor, and natural resources available for productionand thus the types of goods that can be profitably produced by a given company-are more limited in many foreign countries than in the United States.

The higher specialization ratios for affiliates also partly reflected the lower level of consolidation permitted, in the 1977 benchmark survey, for affiliates than for their U.S. parents. In general, for a multi-industry enterprise, the lower the level of consolidation, the higher the ratio. In the benchmark survey, affiliates in a given country could be consolidated only if they were in the same industry or were integral parts of the same business operation. In contrast, U.S. parents were defined as fully consolidated domestic enterprises, and corporations required to be consolidated with the parents were not limited as to industry classification.

Because of industrial diversity, analyses of the industry distribution of MNC's based solely on data disaggregated by industry of classification may be misleading. The extent to which this is the case is indicated by comparing the distribution of MNC sales by industry of classification with that by industry of the sales themselves. For MNC's as a whole, and for U.S. parents and foreign affiliates separately, the distribution of sales by industry of classification did not differ significantly from

that by industry of sales, at least for most major industries (table 4). In general, industries that had large percentage differences in sales between the two distributions accounted for small shares of total sales. For most other industries, gains and losses of sales due to redistribution of sales from industries of classification to industries of the sales themselves were largely offsetting.

For MNC's as a whole, manufacturing accounted for 50 percent of total sales by industry of classification and 46 percent of total sales by industry of sales; the comparable percentages for trade MNC's were 11 and 15 percent, respectively. The shares for petroleum MNC's were virtually identical—28 percent and 22 percent, respectively. Among petroleum subindustries, however, there were significant, but nearly offsetting, differences in shares between the two distributions. The share of petroleum and coal products was higher-20 percent compared to 13 percent—and the shares of petroleum wholesale trade, oil and gas extraction, and "other petroleum" somewhat lower, when sales were distributed by industry of classification rather than by industry of sales.

### Size of MNC's

#### MNC's as a whole

The distribution of the worldwide consolidated assets of U.S. MNC's by asset size class was highly skewed-a small number of MNC's accounted for a disproportionately large share of assets (table 5 and chart 12). The 62 largest MNC's-those with worldwide consolidated assets of at least \$5 billion each—accounted for less than 2 percent of the number, but for 50 percent of the consolidated assets, of all MNC's. At the other end of the distribution, 54 percent of MNC's had consolidated assets below \$50 million each, but they accounted for less than 2 percent of total MNC consolidated assets. For all MNC's, average consolidated assets were about \$530 million, while median consolidated assets were under \$50 million.

The asset size distribution of U.S. MNC's was skewed in each major industry as well. In manufacturing, MNC's with consolidated assets of at

least \$5 billion accounted for 1 percent of the number, but for 32 percent of the consolidated assets, of all manufacturing MNC's. In finance (except banking), insurance, and real estate, MNC's with at least \$5 billion of consolidated assets accounted for 4 percent of the number, but for 72 percent of the consolidated assets, of all MNC's. In petroleum, they accounted for 10 percent of the number, but 78 percent of the consolidated assets.

Of total consolidated assets of the 62 largest MNC's, finance (except banking), insurance, and real estate—mainly insurance—accounted for about one-third. The relatively large assets of insurance MNC's reflected the sizable financial investments that these companies made with the revenues obtained from policy premiums. (However, in most cases, these companies' liabilities, which consist primarily of expected claims against policies, were almost as large as their assets, so that net assets tended to be small.)

Manufacturing and petroleum each accounted for about one-fourth of the consolidated assets of the 62 largest MNC's. Of the manufacturing total, 46 percent was in transportation equipment, 15 percent in nonelectrical machinery, 13 percent in chemicals, and 12 percent in metals.

The 62 largest MNC's accounted for 42 percent of the sales and 29 percent of the employment—compared with 50 percent of the consolidated assets—of all MNC's. Their much smaller share of employment reflected the fact that many of these MNC's were classified either in finance (except banking), insurance, and real estate or in petroleum, which are industries with relatively low ratios of employment to total assets.

## US. parents and foreign affiliates

The asset size distributions of U.S. parents and of foreign affiliates were also highly skewed toward the larger parents or affiliates (table 6).

For U.S. parents, the distribution was roughly similar to that for the MNC's as a whole. There were 60 parents with assets of at least \$5 billion each; they accounted for 1 percent of the number, but 47 percent of the assets,

<sup>4.</sup> In addition, if a U.S. corporation was normally excluded from full consolidation in reports to stockholders because its operations were largely unrelated to those of the owning enterprise, the benchmark survey nevertheless required it to be consolidated (or argregated. If consolidation would have caused an under barden) with the owning enterprise. See technical note for further explanation.

of all U.S. parents. In addition, the distribution was skewed in each major industry, as shown in table 6. Parents with assets of at least \$5 billion accounted for 1 percent of the number, but 26 percent of the assets, of all manufacturing parents; 4 percent of the number, but 74 percent of the assets, of all parents in finance (except banking), insurance, and real estate; and 7 percent of the number, but 66 percent of the assets, of all petroleum parents. Of the assets of the 50 largest parents, finance (except banking), insurance, and real estate accounted for 39 percent, manufacturing for 23 percent, and petroleum for 20 percent.

Primarily because foreign affiliates served smaller markets than their U.S. parents, the average asset size of affiliates was considerably smaller than that of parents-\$21 million compared with \$451 million. As a result, foreign affiliates were much more highly concentrated in the smaller size classes shown in table 6. Only 1 affiliate out of 23,641 had assets of at least \$5 billion. Nevertheless, the skewness of the affiliates' asset size distribution is evident. There were 837 affiliates with assets of \$100 million or more each. They accounted for 4 percent of the number, but 59 percent of the assets, of all affiliates. By industry, they accounted for 3 percent of the number, but 48 percent of the assets. of all manufacturing affiliates; 12 percent of the number, but 81 percent of the assets, of all petroleum affiliatesand 6 percent of the number, but 65 percent of the assets, of all affiliates in finance (except banking), insurance, and real estate. Of the assets of the 837 largest affiliates, petroleum and manufacturing each accounted for 32 percent; finance (except banking), insurance, and real estate and "other industries" each accounted for about 18 percent.

## Location of MNC Operations

## U.S. and foreign operations compared

In terms of assets, U.S. MNC's generally had significantly larger operations in the United States than abroad. Of total MNC aggregated assets of \$2,033.4 billion, U.S. parents acounted for 76 percent and foreign affiliates 24

percent (table 1). Aggregated rather than consolidated assets are used in this discussion because of the difficulty in calculating shares based on the latter. As noted above, intercompany positions between a parent and affiliate give rise to assets on the books of both enterprises; a decision to remove these assets from the books of one enterprise or the other to calculate the parents' and affiliates' respective shares of the totals, would have been highly arbitrary.

When MNC aggregated assets were classified by industry of U.S. parent, the affiliate shares of the industry totals so obtained were highest—88 and 35 percent, respectively-in petroleum and mining. In these industries, companies often need to operate abroad in order to secure natural resource supplies.

Affiliate shares were lowest-11 and 10 percent, respectively—in finance (except banking), insurance, and real estate and in "other industries." In the

MNC - multinational company.

<sup>1.</sup> See footnote 1, table 1.

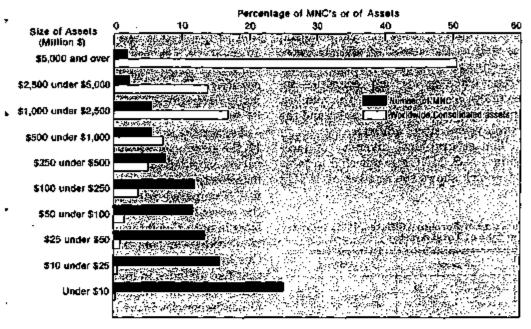

3. Equals sum of total assets of U.S. parents and of their foreign effiliates, as reported in the 1977 benchmark survey. This sum operates duplication of assets that reflect intercompany positions between a parent and its affiliate or between 2 safellates of the same parent. See text for further discussion.

5. Equals sum of sales of U.S. parents and of their foreign affiliates, as reported in the 1977 benchmark survey. This sum contains duplication because of intercompany sales.

NOTE. - In this table, data for U.S. MNC's are only for noubank MNC's.

CHART 12

# Number and Worldwide Consolidated Assets of U.S. MNC's, by Asset Size

U.S. Department of Commerce, Bureau of Scanomic Analysis

Raine 15

former, the low share was mainly attributable to affiliates of MNC's in insurance. Insurance MNC's have tended to concentrate their overseas efforts on reinsuring policies written by unaffiliated foreign companies, rather than on establishing affiliates to write insurance policies directly. In some countries, foreign ownership of insurance companies is restricted or prohibited. In addition, per capita purchases of insurance generally have been lower abroad than in the United States, In "other industries," the affiliate share was particularly low in transportation. communication, and public utilitiesindustries that are often government owned or controlled abroad, so that opportunities for foreign investment are relatively limited.

The affiliate share of MNC assets in manufacturing, which accounted for 44 percent of all MNC aggregated assets, was 29 percent. Among the major industries within manufacturing, the affiliate shares were highest in nonelectrical machinery (35 percent) and lowest in food, metals, and "other manufacturing" (about 25 percent each).

In general, large U.S. parent com-

panies tended to have relatively large total foreign operations, as measured by the combined assets of each parent's foreign affiliates; conversely, small U.S. parent companies tended to have relatively small total foreign operations (table 7). For example, of the 281 U.S. parents in the three largest size classesi.e., parents with assets of \$1 billion or more each-79 percent had foreign operations with combined assets of \$100 million or more, whereas 8 percent had foreign operations with combined assets of under \$25 million; a majority of the large parents with large foreign operations were in manufacturing. In contrast, of the 1,955 U.S. parents in the 3 smallest size classes—i.e., parents with assets under \$50 million each-less than I percent had foreign operations with combined assets of \$100 million or more, whereas 95 percent had foreign operations with combined assets of under \$25 million.

### Area distribution of the foreign operations

By area, more U.S. MNC's had foreign affiliates in developed countries than in developing countries; 2,592 MNC's had affiliates in developed countries and 1,870 had affiliates in developing countries (table 8). There were 187 MNC's with affiliates in "international"-i.e., with affiliates whose operations spanned more than one country and that were engaged in oil and gas drilling, petroleum shipping, other water transportation, or petroleum trading, (If an MNC had affiliates in more than one area, the MNC was counted once in each area. Thus, the sum of MNC's with affiliates in the three major areas exceeds the total number of MNC's. For the same reason, the number of MNC's in the other country or industry cells in table 8 may not add to the subtotals or totals of those countries or industries.)

By country, Canada was host to the largest number of U.S. MNC's—1,907. The United Kingdom was second with 1,288. Other countries where a large number of U.S. MNC's had affiliates were Germany (821), France (689), and Mexico (660).

In terms of assets, the foreign operations of U.S. MNC's were also more heavily concentrated in developed countries than in developing countries. Almost three-fourths of affiliates' assets— \$359.6 billion out of \$490.2 billion—were in these countries (tables 9 and 10). Of the developed countries total, manufacturing affiliates accounted for 42 percent, petroleum affiliates for 21 percent, and affiliates in trade and in finance (except banking), insurance, and real estate for about 13 percent each. Assets of Canadian affiliates at \$86.2 billion, were larger than those of affiliates in any other single country. Manufacturing accounted for about one-third of their assets, and petroleum and finance (except banking), insurance, and real estate for about one-fifth each. In Europe, affiliates had assets of \$206.6 billion. The European Communities (9) accounted for about 80 percent of the assets, of which over one-half were in manufacturing; the United Kingdom, Germany, and France had the largest shares. Japanese affiliates had assets of \$41.8 billion.

Assets of affiliates in developing countries were \$115.8 billion. These assets were less concentrated in manufac-

turing and trade, and more concentrated in finance (except banking), insurance, and real estate, than were assets of affiliates in developed countries. The greater concentration of assets in finance (except banking), insurance, and real estate largely reflected the tendency of MNC's to locate their finance and holding company affiliates in certain developing countries—Bermuda, the Netherlands Antilles, and Panama, in particular-in response to incentives, such as tax benefits, offered by the countries. Almost two-thirds of all assets in developing countries were in Latin America; assets were largest in Brazil

and Bermuda—with just over \$17 billion each. Most of the assets in Brazil were in manufacturing, while most of those in Bermuda were in finance (except banking), insurance, and real estate.

The number, sales, and employment, as well as the assets, of affiliates were heavily concentrated in developed countries; affiliates in these countries accounted for 66 percent of the number, and 69 percent of both the sales and the employment, of all affiliates.

The geographical diversity of individual U.S. MNC's is reflected in table 11, which shows the number of MNC's

Buppressed to avoid disclosure of data of individual companies.

with affiliates in various numbers of countries. Overall, MNC's were not highly diversified geographically. Of the 3,425 MNC's, 49 percent had affiliates in only 1 country and 31 percent in only 2 to 5 countries; in contrast, 10 percent of the MNC's had affiliates in 6 to 10 countries, 7 percent in 11 to 20 countries, and 4 percent in more than 20 countries. The single most geographically diversified MNC had affiliates in 86 countries.

Among the industries shown in table 11, the geographical diversity of MNC's varied considerably. MNC's in chemical manufacturing were the most diversified. Compared with other industries, the percentage of MNC's that had affiliates in only 1 country was the lowest—26 percent—in this industry. Also in this industry, the percentage of MNC's that had affiliates in more than 20 countries was the highest—19 percent. Other industries in which MNC's were highly diversified geographically were food and transportation equipment manufacturing, and petroleum.

MNC's in finance (except banking), insurance, and real estate and in trade were the least geographically diversified. Compared with other industries, the percentages of MNC's that had affiliates in only I country were the highest—77 and 59 percent, respectively—and the percentages that had affiliates in more than 20 countries were the lowest—about 1 percent each—in these industries.

## U.S. Parent's Percentage Ownership of Foreign Affiliates

As noted previously, ownership by a U.S. person of 10 percent or more of the voting securities, or the equivalent, of a foreign business enterprise is considered evidence of the lasting interest, in or degree of influence over the management of, the enterprise that characterizes U.S. direct investment abroad. However, U.S. parents may not have actual control over the operations of a foreign business enterprise until their ownership exceeds 50 percent. A foreign affiliate in which the combined ownership of all U.S. parents exceeds 50 percent is referred to as a majorityowned foreign affiliates (MOFA).

NOTE.—In this table, data for U.S. parents are only for nonbank parents of nonbank affiliates and data for affiliates are only for nonbank affiliates of nonbank parents.

Of the 23,641 affiliates, 19,524—or 83 percent—were majority owned; 4 percent were owned at least 10 but under 25 percent, 8 percent were owned at least 25 but under 50 percent, and 5 percent were owned exactly 50 percent (table 12). MFA's accounted for 74 percent of total affiliates assets. Their shares of sales and employment were 80 and 78 percent, respectively. Wholly owned affiliates—those owned 100 per-

cent by their U.S. parents—accounted for 86 percent of the number and 79 percent of the assets of all MOFA's. Their share of sales was 82 percent and of employment 75 percent.

The remainder of this section discusses data only for the larger MOFA's—those with assets, sales, or net income over \$3 million (see addendum to table 12). In the 1977 benchmark survey, much more detailed data were collected for this group of affiliates than for any other. The larger MOFA's accounted for 61 percent of the number, but for almost all of the value, of all MOFA's. As a result, their

shares of the assets, sales, and employment of all affiliates, regardless of ownarship—72, 78, and 76 percent, respectively—were only slightly lower than the corresponding shares for all MOFA's.

By industry, the shares of total affiliate assets accounted for by the larger MOFA's were lowest in mining (49 percent) and metal manufacturing (47 percent) (tables 9 and 13). In many countries, mining and the primary metal industries were subject either to government restrictions on, or to strong national sentiment against, ma-

(Test continued on p. 43)

<sup>5.</sup> If more than one U.S. parent ewaed at least 10 percent of a foreign affiliate, the ewaership perceptages of all the parents were combined in table 12. However, in 1977, only 346 affiliates—just ever 1 percent of all affiliates—had multiple U.S. narents.

MNC = multinational company.

1. A U.S. MNC that had affiliates in more than one country or industry is counted once it seek country or industry in which it had affiliates. Thus, the numbers appearing in individual country/industry calls do not add to the subtotals and totals.

<sup>2.</sup> Members of the Organization of Petroleam Exporting Countries (OPEC) Ser. Algeria. Econdor, Gabon, Indonesia, Iran, Iraq, Kuwait, Libya, Nigerian, Qatar, Saudi Arabis-Venezuela, and United Arab Emicatas.

Note. In this table, data for U.S. MNC's are only for nonbank MNC's.

Nove.—In this table, data for milliness are only for morbanic efficiency of morbanic parents.

(Test continued from p. 49)

jority ownership by foreign investors. The shares of assets accounted for by the larger MOFA's were highest in food and non-electrical machinery (84 percent each) and in electrical machinery (81 percent).

By area, the larger MOFA's accounted for nearly the same shares of assets in the developed and developing countries—71 and 72 percent, respectively. Among the individual countries shown in tables 9 and 13, however, the shares of the larger MOFA's varied widely. They were highest—90 and 98 percent, respectively—in Libya and Egypt, countries in which most of the assets were in petroleum. They were lowest—7 percent—in South Korea. Other countries where MOFA shares of assets were relatively low were Japan, India, Spain, and Mexico.

Each of the countries with low MOFA shares maintained restrictive policies, as of 1977, toward majority ownership by foreign investors. In South Korea, investments had to be approved by the Government. Foreign equity usually could not exceed 50 percent except in very capital intensive or high technology industries, or in certain industries that did not compete with existing South Korean firms.

In Japan, as in South Korea, all foreign investments were subject to Government approval. Until the early 1970's, foreign equity participation was limited to 50 percent in new, and 25 percent in existing, companies. Although these limits were raised to 100 percent by 1977, approval of investment proposals with up to 100-percent foreign participation was not assured.

In India, firms were required to dilute foreign equity participation to no more than 40 percent, with exceptions in high priority, high technology, and export industries. Large firms, and firms that had not reached the required equity dilution, needed Government consent before significant capital expansion could be undertaken. In Spain, Government approval was generally required for investments with 50-percentor-more foreign ownership. Exceptions were made, especially for firms that

1. In cases where more than one U.S. perent has ownership of 10 percent or more in a foreign affiliate, this table shows the ownership of all of the U.S. percent combined.
2. In the 1977 benchmerk survey, the most extensive and detailed data were obtained for this group of affiliates. Thus, in the helmerk curvey publication U.S. Direct Instalment Afrond, 1977 and in tables 8 and 13 of this article, data for "majority-owned foreign affiliates" are for the saufiliates, rather than for all affiliates owned over 50 percent.

Nove.—In this table, date for efficienciate only for nonbank affiliates of nonbank perents.

created at least 100 jobs or favorably affected Spain's balance of payments. In Mexico, a 1973 law restricted foreign ownership of new investments in most industries to 49 percent.

## Form of Organization of Parents and Affiliates

### Legal form of organization

Of the 3,425 U.S. parents, 3,001, with assets of \$1,534.7 billion, were incorporated and 74, with assets of \$8.5 billion, were unincorporated (mainly partnerships). The remaining 350 parents were individuals, estates, and trusts that directly owned foreign affiliates. Because

these parents did not have to report financial and operating data in the 1977 benchmark survey, their U.S. assets were considered zero.<sup>4</sup>

Of the 23,641 foreign affiliates, 20,498, with assets of \$428.1 billion, were incorporated and 3,143, with assets of \$62.1 billion, were unincorporated (table 14). Branches accounted for nearly all—39 and 93 percent, respectively—of both the number and total

<sup>6.</sup> However, if a U.S. individual, estate, or trust held its investments abroad indirectly through a U.S. bosiness enterprise, the U.S. business enterprise, rather than the individual, estate, or trust, was considered the U.S. parent; in this case, the autorprise's domestic assets were reported and were classified according to the enterprise's form of organization.

í ١

D Suppressed to avoid disclosure of data of individual companies.

1. For purposes of this table, individual companies conduct of affiliates that were owned more than 50 percent by all U.S. parents combined and that had easels, sales, or not faccome of more than 53 million in 1977.

2. See feature 2, table 5.

Norge.—In this table, data for affiliates are only for nonbank affiliates of nonbank perente.

assets of unincorporated affiliates; partnerships accounted for most of the remainder.

By industry, incorporated affiliates' shares of the assets of all affiliates were highest-97 and 94 percent, respectively-in manufacturing and trade, and were lowest-69 and 75 percent, respectively-in mining and petroleum, Within manufacturing, these affiliates' shares were consistently high-over 90 percent-in each industry. The relatively low share in petroleum was almost entirely attributable to affiliates engaged in oil and gas extraction. Incorporated affiliates accounted for only 44 percent of the assets of these affiliates, compared with 87 percent of the assets of affiliates in petroleum and coal products. In the past, tax advantages encouraged the organization of affiliates engaged in petroleum extraction as branches. Although these advantages had been largely eliminated by 1977, their elimination apparently did not result in the reorganization of a significant number of affiliates.

By area, incorporated affiliates accounted for a larger share of the assets of all affiliates in developed countries than in developing countries—91 percent compared with 74 percent. Among developing countries, incorporated affiliates' shares of assets were lowest in countries where petroleum extraction and mining were the dominant affiliate industries.

## Number of affiliate establishments

A given affiliate may consist of more than one establishment. A question in the 1977 benchmark survey asked the "number of separate (noncontiguous) physical locations where business is conducted, goods are produced, or services or industrial operations are performed" by the affiliate. Of the 97 percent of affiliates from which responses were obtained, 61 percent were single-establishment enterprises; 28 percent had 2 to 5 establishments, 5 percent had 6 to 10 establishments, and 6 percent had 11 or more establishments (table 15).

By major industry, the percentage of affiliates that were single-establishment enterprises was lowest (48 percent) in mining; most other affiliates in that industry had two to five establishments. The percentage was highest (78 percent) in finance (except banking), insurance, and real estate, which includes holding companies (92 percent of which had only one establishment).

Among major industries, petroleum had the highest percentage of affiliates

 $<sup>^{\</sup>rm D}$  Suppressed to avoid disclosure of data of individual companies. 3. See Lottooke 3, table 3.

Nora.—In this table, data for affiliates are only for nonbank affiliates of nonbank parents.

with 11 or more establishments-14 percent. Within petroleum, affiliates with 11 or more establishments accounted for particularly large proportions of all affiliates in petroleum and coal products (which includes integrated refining and extraction) and petroleum wholesale trade. In the major industries outside petroleum, affiliates with 11 or more establishments accounted for 6 percent or less of all affiliates. However, in a few individual industries, such as retail trade, office and computing machines, and rubber products, the percentages were much higher—well over 20 percent each.

#### Technical Note

For this article, MNC worldwide consolidated assets were roughly approximated as the sum of total assets of U.S. parents and of their foreign affiliates, as reported in the 1977 banchmark survey and as shown in table 1, column 4, less: (1) U.S. parents' receivables from, and equity investment in, foreign affiliates, (2) affiliates' receivables from U.S. parents, and (3) affiliates receivables from, and equity investment in, other foreign affiliates of their U.S. parents.

For several reasons, the worldwide consolidated assets of a given MNC, as calculated for this article, may be higher than they would have been if calculated by the MNC itself. First, the assets of all foreign bosiness enterprises owned at least 10 percent by their U.S. parent have been included in MNC worldwide consolidated assets in this article in order to conform to U.S. direct investment concepts. In contrast, under U.S. generally accepted accounting principles (GAAP), only MOFA's—affiliates owned more than 50 percent by their U.S. parent—would be included in a U.S. company's worldwide consolidation.

Second, a given MNC's worldwide consolidated assets, as calculated here, may be higher than under GAAP because of the consolidation rules applied to U.S. parents in the 1977 benchmark survey. In the survey, a U.S. parent was defined as a fully consolidated U.S. business enterprise. According to the survey rules, the U.S. enterprise, under certain circumstances, had to include U.S. subsidiaries in its consolidation that would normally have been excluded under GAAP. Specifically, if a U.S. subsidiary was owned more than 50 percent by the enterprise, but was normally excluded from full consolidation in reports to stockholders—because, for

Nove. - In this table, data for affiliates are only for nonbank affiliates of nonbank parents.

example, it was a finance company, but the owning enterprise was a manufacturer, or its operations were otherwise unrelated to those of the owning enterprise—the benchmark survey nevertheless required its data to be consolidated (or aggregated, if consolidation would have caused an undue burden) with those of the enterprise. It should be noted that, if the subsidiary in question were aggregated, rather than consolidated, the U.S. parent's assets would be further overstated because, in aggregation, the duplication caused by intercompany assets would not be eliminated. (In addition, this consolidation (or aggregation) would affect the distribu-

tion of U.S. parent (and, hence, MNC) data by industry, if the corporation being consolidated (or aggregated) were in a different industry from the owning enterprise.)

Third, MNO worldwide consolidated assets, as calculated here, may include the assets of some foreign affiliates that, even if majority owned, are not normally included in an MNCs worldwide consolidation. For example, affiliates whose activities are unrelated to those of their U.S. parents, or whose status is in doubt because of unstable conditions in foreign host countries, may not normally be consolidated by the MNC.

Finally, some intercompany assets of U.S.

parents and their foreign amiliates that normally would be eliminated in consolidation were not separately identified in the 1977 benchmark survey. Thus, the duplication caused by these intercompany assets, which was probably small, could not be entirely eliminated in deriving MNC worldwide consolidated assets for this article.

Affiliates' receivables from other foreign affiliates were reported only for MOFA's. Thus, consolidated worldwide assets, as defined here, are overstated to the extent minority-owned affiliates had receivables due from other foreign affiliates of their U.S. parents.
